 **Caution:** *Blades are extremely sharp.*

Be careful when inserting and removing blades. The magnetic end cap holds and protects up to six blades.

Do **not** apply lateral pressure when using this knife or the blade may snap. Blades are **not** meant for chip carving in hardwoods or for large stock removal, but rather for fine detail work achievable because of the thin, razor-sharp blades.

 **Caution:** *Lateral pressure can cause blades to snap.*

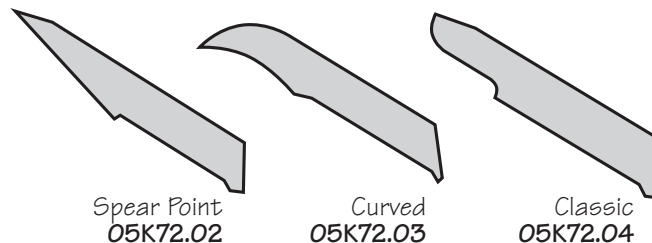

For maximum comfort,  
orient blade vertically  
as shown.

Tighten collet to  
secure blade.

## Replacement Blades

Blades can be honed many times before replacement. Replacement blades are available in packs of 10 per style; each blade is sealed in foil. Save the foil packs for safe blade disposal. To sharpen blades, we recommend our honing compound (05M08.01) or PSA-backed micro-abrasive applied to a wooden paddle.
